

Running Board Lifts

Startracks Custom Power Running Board Lifts

Our patented powered running board lifts were developed to assist individuals who can at least stand to enter a vehicle such as pickups, SUV's, and vans. The running board, which is 10 inches deep, is custom fabricated for each vehicle. Custom installation required for each vehicle is also required. Vehicle color matching is also offered as an option when purchasing the running board. The running board is powered by a 12 volt motor hydraulic actuator system which is located under the vehicle, via wireless remote. This lift, which is attached to the frame of the vehicle, can be installed on either side or both sides to suit the needs of the customer. The running board lift is designed to allow the user to move the lift in a "up and down" motion at any time by triggering the remote.

The logo for Startracks Custom Lifts, featuring a stylized green and blue 'S' followed by the text 'startracks Custom Lifts' in a blue script font.
